

ASBESTOS MANAGEMENT

Aim

The course is aimed at the Estates and Facilities function who are involved in the maintenance of buildings and associated plant, thereby ensuring the health and safety of maintenance workers and others who may encounter asbestos in the workplace.

Please note: this course is not intended to equip delegates with the specialist knowledge needed to conduct the removal of items such as asbestos insulation, asbestos coatings and asbestos insulating board. This is governed by strict regulations for which specialist licenses and strict accreditation is required.

Course Duration

The course will be of one day duration.

Course Objective

On successful completion of the course delegates will be aware of the health and safety issues associated with asbestos, thereby significantly reducing the risk to uses of the premises. Familiarisation with both material and priority algorithms as part of the management plan.

Course Syllabus

- Nature of asbestos, related health concerns and historical overview.
- Who is at risk and asbestos uses – where it is found in buildings?
- Five stages of asbestos management, looking for asbestos, material and priority algorithms, deciding if there is a problem, deciding what action needs to be taken, recording the findings and acting and reviewing the assessment.
- Understanding which work on ACM's is required to be carried out by licensed contractors, which work is non-licensed and which activities is notifiable non-licensed work.

Certification

Delegates will receive an attendance certificate.
