

## **LOCK OUT / TAG OUT (LOTO)**

### **Aim**

When machines or equipment are being prepared for service or maintenance, they often contain some form of hazardous energy that can cause harm to people in the area. Without the use of proper LOTO safety procedures, the serviced equipment can unexpectedly start up or otherwise release these forms of energy. This can lead to injuries and even death to the people working on the machine and even to others in the working area.

Every Estates and Facilities function should have an energy control programme.

### **Course Duration**

The course will be of half day duration and tailored to include client's internal procedures and documentation for inclusion within the presentation (prior discussion will be required before commencement of training).

### **Course Syllabus**

- Legal Requirement
- Case Studies
- Six steps of LOTO safety and lockout/tagout procedures
- Preparation
- Shutdown
- Isolation
- Lockout/Tagout
- Stored energy check
- Isolation verification

### **Certification**

Delegates will receive an attendance certificate.
